PROFESSIONAL SUMMARY

Early-career software developer with hands-on R&D experience building C#/.NET web applications, backend components, database integrations, and Docker-based workflows. Combines a Computer Engineering foundation with two research publications spanning cybersecurity, machine learning, deep learning, and computer vision.

EDUCATION

Bachelor of Engineering in Computer Engineering (2026)
Sirindhorn International Institute of Technology, Thammasat University

TECHNICAL SKILLS

Languages: C#, Python, SQL | Additional: C, C++, Java, PHP, Bash, HTML, CSS, MATLAB
Backend: .NET 8, ASP.NET Core MVC, Entity Framework Core (EF Core), MySQL, Flask, JSON Web Token (JWT) authentication, Repository Pattern, API Integration
Tools & Platforms: Docker, Git, Riot API, Nextcord, OpenCV, Arduino
Research: Cybersecurity, SQL Injection Detection, Machine Learning, Deep Learning, Computer Vision, IoT

SELECTED PUBLICATIONS

- **Co-author**, "Rootkit and Bootkit Detection Using TEE–TPM Architecture with Machine Learning and Blockchain Verification." *18th International Conference on Knowledge and Smart Technology (KST)*, 2026, pp. 372–378.
- **Co-author**, "Automated Detection and Segmentation of Choroidal Neovascularization in OCT Using Deep Learning." *Science & Technology Asia*, 2025.

EXPERIENCE

Infinite Technology Corporation — Bangkok, Thailand

Software Developer (R&D) — May 2026 – Present

- Progressed from R&D Intern to full-time Software Developer in May 2026; now engineer and maintain C# applications with .NET 8 and ASP.NET Core MVC.
- Build EF Core data-access and JWT-authenticated backend components using the repository pattern.

Research and Development Intern — Jan 2026 – May 2026

- Delivered core features and database integrations for a clinic appointment system.
- Containerized the application with Docker to standardize testing and deployment workflows.

SELECTED PROJECTS

SQLIX - SQL Injection Detection System | *Python, Flask, Regex, Petri Nets*

- Engineered a multi-layer SQL injection detector using regular expressions, keyword randomization, and Petri-net analysis for Boolean-based attack patterns.
- Routed real-time detection alerts and detailed logs to Discord to support rapid investigation.

Taek8 - Discord TFT Match Tracker | *Python, Riot API, Nextcord*

- Integrated the Riot API with a Python/Nextcord bot to automate match tracking, daily and all-time scoreboards, placement alerts, and voice notifications.

Visual Acuity Screening System | *Python, OpenCV, Arduino*

- Built an OpenCV/Arduino prototype that randomized optotypes and validated patient responses to reduce repetitive work during visual-acuity screening.

LEADERSHIP & SERVICE

ScamMBled: Cracking the Scam: Welfare Support Staff (2025) | **Buddhist Volunteer Camp:** Organized a two-day camp (2024)
